

INTERNATIONAL SPACE SOLAR POWER STUDENT COMPETITION | 2017-2018

DATE: 29 December 2017 (*rev 1/ see: Revised Due Date*)
SUBJECT: The International Space Solar Power (SSP) Student Project Competition
[2017-2018]

Dear Colleague(s),

The need to advance the goals of STEM (science, technology, engineering & mathematics) education is especially important in encouraging the emergence of future generations of researchers, technologists and innovators in the space sector in general, and in particular in the special fields of expertise required for the successful exploration, development and eventual settlement of space. The critical topic of *Space Solar Power* (SSP) – harvesting solar energy in space affordably and delivering it to markets in space and on Earth – has been studied as a vision for Humanity’s future for almost 50 years. And yet there are almost no undergraduate or graduate courses (and no degrees of which we are aware) offered on this topic at either the undergraduate or the graduate levels in accredited colleges or universities.

If *Space Solar Power* – which is critical to space development and settlement – is to become a reality, this must change.

During 2017 SPACE Canadaⁱ, the International Astronautical Federation (IAF) Power Committee, the Global Space Solar Power Working Group (GSSP-WG) of the International Academy of Astronautics (IAA), the National Space Society (NSS) International Space Development Conference (ISDC) SSP Track in a cooperative effort organized an annual faculty-advised, student-conducted international research and engineering research/paper competition on the topic of Space Solar Power.ⁱⁱ The first year of the Competition was highly successful – involving more than two dozen initial project proposals with multiple university / college participants and almost four dozen students, and leading to original research studies that were presented at the Power Symposium of the IAF at the annual International Astronautical Congress (IAC) in Adelaide, Australia (September 2017).

On the basis of the highly-successful first year, the participating organizations have decided to renew this effort during 2017-2018; this letter is the announcement of that competition.

Upon request, additional details concerning the 2017-2018 Competition will be provided;ⁱⁱⁱ the key points are as follows:

1. This will be an annual competition; this is the second year: 2017-2018.^{iv}

ⁱ SPACE Canada is a non-profit, non-governmental organization based in Canada; the purpose of the organization is to promote international dialogue on and understanding of the topic of Space Solar Power.

ⁱⁱ It is anticipated that with time some organizations may be added as participants in implementing the annual competition, while others may choose not to be involved; as the foundation of the competition, SPACE Canada is the principal sponsor of the effort, and the prizes. Cooperation has been established among SPACE Canada, the IAF Power Committee, the IAF Power Committee, the ISDC SSP Track organizers and the IAF Space Generation Advisory Council (SGAC).

ⁱⁱⁱ Additional information and updates will be posted to <http://SPACECanada.org> as appropriate.

^{iv} This new competition builds upon and integrates two previous independent events: an annual SSP visualization competition held in conjunction with the NSS ISDC conference, and a yearly SSP student paper competition resulting in a paper and presentation at the annual International Astronautical Congress (IAC), organized by the IAF Power Committee and the IAF SGAC.

INTERNATIONAL SPACE SOLAR POWER STUDENT COMPETITION | 2017-2018

2. The purpose of the competition is to engender new, meaningful and credible student research projects in the broad field of *Space Solar Power*, and to support the presentation of the best of the various projects in an international forum including explicit recognition of the best research with a formal prize.
3. The International Space Solar Power Student Competition Prize during 2017-2018 will have four parts: (a) travel^v and registration support for selected semi-finalist teams to attend the annual ISDC (see below); (b) a formal certificate of recognition for selected semi-finalist teams (as a team, and for each team member, including the faculty advisor); (c) travel and registration support for one or two selected finalist team(s) to attend the annual IAC SSP Symposium (see below); (d) a formal certificate and a plaque for the selected winning team(s) (the plaque for the team, and a certificate for each participant, including the faculty advisor).
4. The competition is open to participation by faculty-coached, student-implemented project team, including a faculty advisor, not fewer than two undergraduate students and potentially one or more graduate students from any accredited international college or university. A given project team may involve more than a single university in an integrated team; however, each team from any participating college or university must include not less than two undergraduate students and one faculty advisor.
5. The competition will involve three stages: (1) registration and proposal / abstract submission by proposing teams; (2) following selection of semi-finalists by Competition leaders, preliminary presentation of interim results at the annual NSS International Space Development Conference (in late May each year; to be held in 2018 at the Sheraton Gateway Hotel near LAX);^{vi} and (3) following selection of finalist teams, presentation (with a formal technical paper) of up to three best projects at the IAF Power Committee Solar Power Satellite (SPS) Session at the annual International Astronautical Congress (IAC), to be held during October 1-5, 2018 in Bremen, Germany (see: <http://www.iac2018.de/>).
6. Semi-finalists in the annual competition will be chosen by an independent review process based on submitted abstracts and draft presentation materials; these will be provided with a fixed level of financial support for their attendance and presentation of interim results at the annual ISDC SSP Track. (A team participating in the ISDC must send to the Conference not less than one member of the student team and one faculty advisor; however otherwise the decision as to who should participate and how the funds should be distributed among team members to meet travel and registration costs will be flexible.)
7. Finalists in the annual competition will be chosen by an independent review process based on the presentations made at the annual ISDC SSP Track, and updated draft research presentation results. In the event that no project teams are adjudged to have achieved a sufficiently high level of technical accomplishment in a given year, no award will be made during that year.

^v The funding support provided by Competition will be provided in the form of reimbursement of expenses incurred by a selected and previously-approved team at each stage of the competition; it may be used for (1) airfare, (2) ground transportation, (3) lodging, and (4) meeting registration fees; however, it may not be used for reimbursement of food or related expenses.

^{vi} At the ISDC 2018, a special space solar power event is being organized in lieu of the normal SSP track, the "SPS-2018 International Symposium and Workshop" during May 24-26, 2018. The semi-finalist presentations for 2018 will be made at SPS-2018. For additional information about SPS-2018, please contact the organizers at: contact.SPS2018@gmail.com

INTERNATIONAL SPACE SOLAR POWER STUDENT COMPETITION | 2017-2018

8. The chosen winner(s) will be provided with a fixed level of financial support for their attendance and presentation of interim results at the annual IAC SPS Symposium. A formal paper is required, and must be submitted to the IAC according to the rules of the conference. (Participation in the IAC must comprise not less than one student team member and one faculty advisor; however otherwise the decision as to who should participate and how the funds should be distributed among team members to meet travel and registration costs will be flexible.)
9. In order to be eligible, members of each competing team (as described elsewhere) must be available and able to attend and present at the ISDC (semi-finalist) and the IAC (finalist).
10. The competition will encompass multiple disciplines, but will be focused each year around a particular Solar Power Satellite concept. During 2017-2018, the focus will be on highly-modular microwave wireless power transmission (WPT) Solar Power Satellite (SPS) concepts as embodied in the “SPS-ALPHA” (SPS by means of Arbitrarily Large Phased Array) and related SPS architectural concepts. Details are available upon request.
11. The acceptable disciplines/fields for research projects include (a) architecture level studies; (b) end-to-end energy concepts & technology (including wireless power transmission (WPT), solar power generation, etc.); (c) structural systems, controls and dynamics technology; (d) space transportation technology and engineering for SPS (including Earth-to-orbit or in-space transportation and/or propulsion); (e) space resources utilization for SPS; (f) ground systems and integration; (g) applications of SPS to space missions and markets, such as lunar or Mars surface power, power in space, etc.; (h) near-term SPS system and technology demonstration concepts; (i) space policy, legal and regulatory considerations across all of the above (including international cooperation, spectrum management, space debris, etc., etc.); and, (j) financing concepts for all of the above.
- 12. The first deadline for participation in the 2017-2018 competition is the development and submission of an abstract for a proposed student research project by not later than January 31, 2018.**

We look forward to participation by students and faculty from accredited colleges and universities globally in this year’s competition. If you would like to indicate interest in participating and to obtain additional information, please contact us at the email address below.

With best regards,

John C. Mankins
Lead, International Space Solar Power Student Competition
Member of the Board, SPACE Canada
Secretary, IAF Power Committee
Co-Chair, ISDC Space Solar Power Track
